<b>Remark</b>	
<p>1、 It is recommended that customers install the over-voltage and under-voltage protection and surge protection devices in the lamp power supply circuit to ensure the safety of electricity consumption.</p> <p>2、 The led driver,as a part of the whole lamp is used in combination with the terminal equipment . As EMC performance is affected by LED lamps and wiring, terminal equipment manufactured supplier needs to re-confirm the EMC of the whole set of equipment.</p> <p>3、 Please use the debugging plastic cross or slotted screw driver to adjust the current of the led driver, otherwise it is easy to damage the potentiometer. (The use of a 2mm screwdriver is also acceptable. The torque should not exceed 0.5knm, and a good insulation screwdriver should be used.)</p> <p>4、 When adjusting the output current of the led driver, ensuring that the total output power does not exceed the rated maximum power.</p> <p>5、 The parameters above including the power factor, THD and efficiency are all tested under the condition of environment temperature 25°C , humidity 50%, AC input 230V and 90% output load.</p>

## Installation considerations

- 1.If the led driver has adjustable external potentiometer, we advise you to use 704 silicone to seal the hole well and then plug the waterproof rubber after adjusting output current,
- 2.Lightning protection level meets IEC61000-4-5 standard requirement. If you use the lightning prone area or the are with a complex power grid environment ,we suggest that you should equipped with professional lightning protection module on the led driver AC input terminal.
