Remark	
<p>1. It is recommended that customers install over-voltage protection and surge protection devices in the power supply circuit of lamps to ensure the safety of electricity use.</p> <p>2. The power supply is used as a component of the whole lamp in combination with the terminal equipment. Because the EMC performance is affected by the LED lamps and wiring, the terminal equipment manufacturing The manufacturer needs to re-confirm the EMC of the whole device.</p> <p>3. Please use a special programmer to adjust the current of the power supply, and program and write through the dimming light.</p> <p>4. When adjusting the output current of the power supply, please ensure that the total output power does not exceed the rated maximum power.</p> <p>5. Unless otherwise specified, the above parameters are the test results under the conditions of ambient temperature 25°C, humidity 50%, 100% load, and input voltage 277Vac.</p>
